This book focuses on inquiry-based teaching, one of the five vital aspects of the instructional work of school librarians identified in the second edition of the IFLA School Library Guidelines (2015). Effective implementation of inquiry-based teaching and learning requires a consistent instructional approach, based on a model of inquiry that is built upon foundations of research and best practice. The book explains the importance and significance of inquiry as a process of learning; outlines the research underpinning this process of learning; describes ways in which models of inquiry have been developed; provides recommendations for implementing the use of such models; and demonstrates how the other core instructional activities of school librarians, such as literacy and reading promotion, media and information literacy instruction, technology integration and professional development of teachers, can be integrated into inquiry. Inquiry-based learning is part of "learning to be a learner," a lifelong pursuit involving finding and using information. Inquiry develops the skills and understandings that learners need in new information environments, whether that be as students in post-secondary institutions, as producers and creators in workplaces, or as citizens in communities. Through inquiry-based teaching, school librarians help students to build the essential skills and understandings needed for dealing with complex learning challenges, including analysis, critical thinking, and problem solving. In this book, special attention is given to the development of students' metacognitive abilities, which are essential to their becoming life-long and life-wide learners. This book constitutes the refereed proceedings of the 12th International Conference on Database Systems for Advanced Applications, DASFAA 2007, held in Bangkok, Thailand, April 2007. Coverage includes query language and query optimization, data mining and knowledge discovery, P2P and grid-based data management, XML databases, database modeling and information retrieval, Web and information retrieval, database applications and security. The importance of social studies assessment is beyond question. The National Council of the Social Studies' C3 Framework recognizes the importance of high-quality assessments—its major objective, a "deep understanding of the sociocultural world," has as its underpinning the idea that students must be able to investigate the world, and that teachers must be able to assess their understanding of it. However, there is a comparative dearth of research that focuses on effective social studies assessment, particularly with regard to the impact of teacher practice on the development of best practices. Such research is vital to moving social studies away from an emphasis on testing and more towards using assessment as a means of educating our students. In Best Practices of Social Studies Assessment, we focus on an essential question: what is an "effective" assessment? Helping teachers develop practical, creative, curriculum-appropriate strategies is essential, especially in an era in which teachers are faced with the dilemma of

creating inquiry-based assessments in the midst of preexisting regimes of standardized summative assessments. In this volume, research conducted between university professors and working teachers is described, focusing on innovative assessment practices. These practices include role-playing activities depicting historical events; Socratic seminars revolving around public policy issues; collaborative student projects on a wide range of social inquiries, including the implementation of UN programs; and the promotion of critical thinking and writing skills, on subjects as diverse as school violence and the impact of imperialism. These adaptive assessments highlight the essential role of the teacher in creating assessments that blend higher-order critical thinking, complex content knowledge, and an understanding of their own students. The strategies described in this volume focus on the ability of expert educators to “[acknowledge] the structures, power, and consequences of high-stakes testing regimes while simultaneously designing and sustaining classroom assessment methods that embody the social-participatory nature of learning and reflect research on effective practice” (p. 289). The volume also describes the shared characteristics of the teachers who created these assessments, especially their emphasis on self-reflection and student autonomy, as well as their professional willingness to take on challenges associated with performance-based assessments, even in the face of institutional pressures and external demands.

Including the latest Microsoft 365 features and enhanced support for Mac users, Cengage's Illustrated Series Collection, Microsoft Office 365 & Word 2021 Comprehensive, 1st edition, helps you quickly master the nuances of Microsoft Office. Its concise, student-friendly approach uses a proven two-page layout that allows you to work through an entire task without turning the page. Each module begins with a brief overview of the principles covered while large, full-color screen images illustrate what you see on your computer. Module Learning Objectives are mapped to Microsoft Office Specialist (MOS) certification objectives, and module scenarios are based on Burning Glass market insights data -- helping you sharpen the critical skills you need for academic and professional success. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Become a more competent consumer and producer of research with INTRODUCTION TO RESEARCH IN EDUCATION, 9th Edition! Known for its exceptionally clear writing style and comprehensive coverage, this research methods guide helps you master the basic competencies necessary to understand and evaluate the research of others. The authors familiarize you with common research problems in a step-by-step manner through examples that clarify complex concepts, supported by strong end-of-chapter exercises. This book is a must-read for anyone planning to conduct research or interpret the research of others. Available with InfoTrac Student Collections <http://goengage.com/infotrac>. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Scientists conduct experiments to gather information that will prove or disprove their hypotheses. Chapters explain how experiments are set up with controls and variables, how to write up observations, ways to accurately record data for analysis, and the importance of repeating experiments and comparing results. An example experiment illustrates step by step how students can go about running an experiment for their own science project. This book constitutes the refereed conference proceedings of the 19th International Conference on Web-Based Learning, ICWL 2020, and 5th International Symposium on Emerging Technologies for Education, SETE 2020, held in Ningbo, China in October 2020. Together for the ICWL 2020 Conference and SETE 2020 Symposium 39 full papers were accepted together with 31 short papers out of 233 submissions. The papers focus on the following subjects: Semantic Web for E-Learning, through Learning Analytics, Computer-Supported Collaborative Learning, Assessment, Pedagogical Issues, E-learning Platforms, and Tools, to Mobile Learning and much more. There has been, and continues to be, an explosion of interest in developing new small science centers that is changing the world of museums. This handbook is designed to be a one-stop source for future and current centers, and anyone interested in the important roles these institutions play in their communities. With articles—all written by leaders in field—covering everything from administration, staffing, finance, marketing, exhibit design, and beyond, this comprehensive resource will be essential reading for institutions that are operating successfully, struggling to survive, and those planning major expansions. This volume constitutes the proceedings of the 10th IFIP WG 8.1 Conference on the Practice of Enterprise Modeling held in November 2017 in Leuven, Belgium. The conference was created by the International Federation for Information Processing (IFIP) Working Group 8.1 to offer a forum for knowledge transfer and experience sharing between the academic and practitioner communities. The 20 full papers and 4 short papers accepted were carefully reviewed and selected from 70 submissions. They include research results, practitioner/experience reports and work-in-progress papers and were presented in 8 sessions covering diverse topics related to enterprise modelling and its application in practice. "More than a history of science; it is a tour de force in the genre."—New York Times Book Review A dramatic new account of the parallel quests to harness time that culminated in the revolutionary science of relativity, Einstein's Clocks, Poincaré's Maps is "part history, part science, part adventure, part biography, part meditation on the meaning of modernity....In Galison's telling of science, the meters and wires and epoxy and solder come alive as characters, along with physicists, engineers, technicians and others....Galison has unearthed fascinating material" (New York Times). Clocks and trains, telegraphs and colonial conquest: the challenges of the late nineteenth century were an indispensable real-world background to the enormous

theoretical breakthrough of relativity. And two giants at the foundations of modern science were converging, step-by-step, on the answer: Albert Einstein, an young, obscure German physicist experimenting with measuring time using telegraph networks and with the coordination of clocks at train stations; and the renowned mathematician Henri Poincaré, president of the French Bureau of Longitude, mapping time coordinates across continents. Each found that to understand the newly global world, he had to determine whether there existed a pure time in which simultaneity was absolute or whether time was relative. Esteemed historian of science Peter Galison has culled new information from rarely seen photographs, forgotten patents, and unexplored archives to tell the fascinating story of two scientists whose concrete, professional preoccupations engaged them in a silent race toward a theory that would conquer the empire of time. This book constitutes the refereed proceedings of the 8th International Conference on Data Warehousing and Knowledge Discovery, DaWak 2007, held in Regensburg, Germany, September 2007. Coverage includes ETL processing, multidimensional design, OLAP and multidimensional model, cubes processing, data warehouse applications, frequent itemsets, ontology-based mining, clustering, association rules, miscellaneous applications, and classification. This book constitutes the proceedings of the international workshops co-located with the 16th International Conference on Document Analysis and Recognition, ICDAR 2021, held in Lausanne, Switzerland, in September 2021. The total of 59 full and 12 short papers presented in this book were carefully selected from 96 submissions and divided into two volumes. Part II contains 30 full and 8 short papers that stem from the following meetings: Workshop on Machine Learning (WML); Workshop on Open Services and Tools for Document Analysis (OST); Workshop on Industrial Applications of Document Analysis and Recognition (WIADAR); Workshop on Computational Paleography (IWCP); Workshop on Document Images and Language (DIL); Workshop on Graph Representation Learning for Scanned Document Analysis (GLESDO). Collections of digital documents can nowadays be found everywhere in institutions, universities or companies. Examples are Web sites or intranets. But searching them for information can still be painful. Searches often return either large numbers of matches or no suitable matches at all. Such document collections can vary a lot in size and how much structure they carry. What they have in common is that they typically do have some structure and that they cover a limited range of topics. The second point is significantly different from the Web in general. The type of search system that we propose in this book can suggest ways of refining or relaxing the query to assist a user in the search process. In order to suggest sensible query modifications we would need to know what the documents are about. Explicit knowledge about the document collection encoded in some electronic form is what we need. However, typically such knowledge is not available. So we construct it automatically. Constructing the Persuasive Portfolio helps you learn the art of designing a compelling and effective architectural portfolio. Margaret Fletcher categorizes the architectural portfolio design process into a step-by-step method that you can manage and understand. The full-color book includes 400 portfolio examples from 55 designers, along with more than 50 diagrams, and a set of 48 design actions that are marked throughout. You will learn how to: -Identify your readership -Collect, document, and catalog your work -Organize your portfolio -Visually structure your portfolio -Design your layout -Manage both printed and digital portfolio formats As your ultimate persuasive tool, your portfolio is the single most important design exercise of your academic and professional career. Constructing the Persuasive Portfolio shows you everything you need to know to create your portfolio and is the only portfolio design book you will ever need! Presents step-by-step instructions for librarians on creating a core collection from scratch or revitalizing an existing collection, providing sample core lists in seven subject areas. Introduces the desktop publishing program, covering startup, text input, formats, typography, graphics, and color. Identifies and describes specific government assistance opportunities such as loans, grants, counseling, and procurement contracts available under many agencies and programs. Including the latest Microsoft 365 features and enhanced support for Mac users, Cengage's Technology for Success and Illustrated Series Collection, Microsoft 365 & Office 2021, 1st edition, helps you quickly master the nuances of Microsoft Office. Its concise, student-friendly approach uses a proven two-page layout that allows you to work through an entire task without turning the page. Each module begins with a brief overview of the principles covered while large, full-color screen images illustrate what you see on your computer. Module Learning Objectives are mapped to Microsoft Office Specialist (MOS) certification objectives, and module scenarios are based on Burning Glass market insights data -- helping you sharpen the critical skills you need for academic and professional success. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version. Recommends technologies and techniques for document management with an emphasis on the processes that are appropriate when computers are used to create, access, and publish documents. The authors believe effective management of the intellectual capital of an organization requires central repositories, control over access to information, consistent use of document formats, and processes for workflow. They describe the nature of documents and their components and structure, examine how documents are used and controlled, explore the factors affecting design and implementation of a document strategy, and conclude with a case study from the Parliament of Tasmania. Annotation copyrighted by Book News, Inc., Portland, OR Over 26,000 total pages Background: The Fast and Furious operation was responsible for allowing approximately 2,000 firearms to illegally flow into the

hands of criminals, including Mexican drug cartel associates. On December 14, 2010, Customs and Border Patrol Agent Brian Terry, a United States Marine, was killed while on patrol just miles from the Mexican border. The firearms found at the scene were semi-automatic rifles that were allowed to walk as part of Operation Fast and Furious. Congressional Republicans have investigated Fast and Furious since January 2011. Over the course of the investigation, the Justice Department has provided false information, stonewalled document requests, produced scores of blacked-out pages and duplicate documents, and refused to comply with two congressional subpoenas. In August 2012, the U.S. House of Representatives Office of General Counsel filed suit against the Justice Department. On January 19, 2016, United States District Judge Amy Berman Jackson issued her opinion and ordered DOJ release documents previously withheld under the President's executive privilege claim. On April 8, 2016, DOJ complied with the Judge's order, delivering more than 20,500 pages of documents to the Committee.

RESOLUTION RECOMMENDING THAT THE HOUSE OF REPRESENTATIVES FIND ERIC H. HOLDER, JR., ATTORNEY GENERAL, U.S. DEPARTMENT OF JUSTICE, IN CONTEMPT OF CONGRESS FOR REFUSAL TO COMPLY WITH A SUBPOENA DULY ISSUED BY THE COMMITTEE ON OVERSIGHT AND GOVERNMENT REFORM R E P O R T OF THE COMMITTEE ON OVERSIGHT AND GOVERNMENT REFORM UNITED STATES HOUSE OF REPRESENTATIVES OPERATION FAST AND FURIOUS: RECKLESS DECISIONS, TRAGIC OUTCOMES HEARING BEFORE THE COMMITTEE ON OVERSIGHT AND GOVERNMENT REFORM HOUSE OF REPRESENTATIVES ONE HUNDRED TWELFTH CONGRESS FIRST SESSION OPERATION FAST AND FURIOUS: THE OTHER SIDE OF THE BORDER HEARING BEFORE THE COMMITTEE ON OVERSIGHT AND GOVERNMENT REFORM HOUSE OF REPRESENTATIVES ONE HUNDRED TWELFTH CONGRESS FIRST SESSION This professional reference shows how changes in all aspects of collection management will affect future activities in this area. Microsoft SharePoint now has a 10 percent share of the portal market, and the new release, which features enhanced integration with Office 2007, is sure to give SharePoint a boost Offers clear instructions and soup-to-nuts coverage of this complex product, focusing instead on practical solutions to real-world SharePoint challenges Features tips, tricks, and techniques for administrators who need to install and configure a SharePoint portal as well as ordinary users who need to populate and maintain the portal and use it for collaborative projects Topics covered include setting up a SharePoint portal, matching SharePoint to business needs, managing portal content, branding, collaborating on SharePoint sites, using a portal to improve employee relations and marketing, putting expense reports and other interactive forms on a portal, and monitoring and backing up SharePoint This volume comprises the proceedings of the 20th Annual Irish Conference on Artificial Intelligence and Cognitive Science (AICS 2009). AICS 2009 was hosted by the School of Computer Science and Informatics in University College Dublin on August 19–21, 2009. The AICS Conference is Ireland's primary meeting for those involved in the fields of artificial intelligence and cognitive science. The conference has taken place annually since 1988 and provides a forum for the exchange of ideas and the presentation of research conducted both in Ireland and worldwide. After a rigorous review

process, 21 papers were selected for oral presentation, and a further seven for poster presentations. Six shorter submissions were accepted for presentation at a technology demo session. The program covered a largerange of topics, with submissions covering classification techniques, biologically inspired computation, natural language processing, and applications of AI techniques for the social web and financial markets. Although traditionally the majority of AICS submissions have come from the island of Ireland, AICS 2009 attracted a couple of submissions from farther afield—Mexico and Bulgaria. AICS 2009 continued the tradition of inviting high-profile speakers from the fields. We were delighted to have two high-profile speakers give keynote talks: David R. Millen, from the IBM Watson Research Center, in Cambridge, USA,

gave a paper entitled “Use of Enterprise Social Software to Support Organization and People Sensemaking”; and John Riedl, Department of Computer Science, University of Minnesota, gave a talk on “Collective Intelligence in the Social Web.” We are most grateful to both speakers for taking time out of their busy schedules to come to Ireland and attend AICS. Collecting mushrooms can be done all year round. Every nature lover knows that! And with this diary it is now even possible to record the most beautiful finds for all eternity. In this journal the mushroom picker finds room for the most important notes: - The date - The route to the collection point - The type of fungus - found - The description of the fungus and its environment - and of course there is also room for a photo or alternatively a sketch of the fungus. - and of course there is also room for a photo or a sketch of the fungus. Therefore no more finds are forgotten! A great gift for anyone who loves to roam the countryside and pick mushrooms. That legislation was originally intended to promote settlement and economic development of the American West. A century and a quarter later, the region no longer requires congressional coddling, yet more than half a million mines and mill sites remain abandoned throughout the western states. These sites have created 180,000 acres of polluted lakes and reservoirs and 12,000 miles of contaminated streams and rivers. Montana's Blackfoot River, made famous by Norman Maclean's *A River Runs through It*, is one such battered body of water. Not only did the 1872 law essentially give the land and minerals to miners and mining companies—and it continues to do so today—the law also required no mine reclamation or water quality protection. State mining laws likewise required little or no reclamation. *Wounding the West* traces the role of hardrock mining and its relationship with the American West by following the environmental history of one Montana mine, the Mike Horse, from its 1898 discovery, through its heyday in the 1940s, subsequent abandonment, and eventual cleanup under the coercion of a state law that many would consider ill-suited for abandoned mines. David Stiller argues that taxpayers should treat mining companies like the for-profit enterprises they are and insist that the hardrock mining industry pay a fair royalty for extracted minerals and then put this funding to work correcting the industry's worst historical abuses. These transactions publish research in computer-based methods of computational collective intelligence (CCI) and their applications in a wide range of fields such as the semantic Web, social networks, and multi-agent systems. TCCI strives to cover new methodological, theoretical and practical aspects of CCI understood as the form of intelligence that emerges from the collaboration and competition of many individuals (artificial and/or natural). The application of multiple computational intelligence technologies, such as fuzzy systems, evolutionary computation, neural systems, consensus theory, etc., aims to support human and other collective intelligence and to create new forms of CCI in natural and/or artificial systems. This twenty-first issue contains 7 carefully selected and revised contributions.
