Essentials of Electrical and Computer Engineering introduces technologies such as MEMS (Microelectromechanical Systems) to illustrate how modern technologies are interdisciplinary. Presenting modularized coverage of a wide range of topics to afford instructors great flexibility, Essentials of Electrical and Computer Engineering, is an exceptionally strong teaching tool—gently yet thoroughly introducing students to the full spectrum of fundamental topics; offering strong pedagogical support and clear explanations, and never relying on superficial, cursory explanations. This text may also be useful for the reader who wishes to use a self-study approach to learn the fundamentals of electrical and computer engineering. Roars from the Back of the Bus is an absorbing, amusing and at times moving collection of tales that give a rare insight into the camaraderie that exists between players at the top of their game, showing that relationships forged through experiences on a Lions tour last a lifetime. From the first Tour in 1888, it showcases characters with immense personality who fought together in wars or on rugby pitches in foreign lands, and who shared a bond developed through touring as representatives of the home nations. Despite the changes to the game after the advent of professionalism, the experiences of Jamie Heaslip, Brian O'Driscoll and Joe Worsley are still similar in some ways to those of earlier intrepid tourists like Blair Mayne, Lewis Jones, Sir Carl Aarvold or David Rollo. Containing defining memories and private insights from across the tours and the decades, Roars from the Back of the Bus shows that the Lions ethos remains strong at the heart of every team. A text developed from a previous work, An Introduction to Computer Logic (1974) by Nagle, Carroll, and Irwin, which was a widely adopted text on the fundamentals of combinational and sequential logic circuit analysis and synthesis. The present text retains its predecessor's strong coverage of fundamental theory. To address practical design issues, over half of the text is new material that reflects the many changes which have occurred in recent years, including modular design, CAD methods, and the use of programmable logic, as well as such practical issues as device timing characteristics and standard logic symbols.
