Expanded Coverage, Cases and Analysis re: Expert Evidence; Electronic Evidence; Attorney's Fees and Costs;Punitive Damages; and more! NEW FORMS » Brief in Opposition to Motion to Amend Answer to Include After-Acquired Evidence Defense » Litigation Hold Letter – Missing Documents/Destruction of Evidence » Default Standard for Discovery of Electronically Stored Information » Definition of “Document” in Document Request Covering ESI

Online interactive resources for asynchronous modality in teaching grade 12 General Biology Jun 09 2021 Master's Thesis from the year 2021 in the subject Didactics - Biology, grade: 12, , language: English, abstract: This research assessed the status of online interactive resources for asynchronous modality in teaching grade 12 General Biology 1 at the University of Cebu – METC Campus, Cebu City during School Year 2020 – 2021 as the basis for an enhanced learning module. This study utilized a quasi-experimental method of research employing the use of a non-equivalent control group pretest-posttest design. Two sections of Grade 12 STEM with a total of 47 students participated as research respondents, in both the experimental and the control groups. The students answered a 40-item multiple-choice questionnaire as a research instrument. The control group was treated with only pure-text modules and PowerPoint presentation. In contrast, students from the experimental group utilized online interactive resources containing some hyperlinked lectures, video lectures, interactive games, animations, and some simulated demonstrations that were adopted and utilized for Grade 12 STEM learners in General Biology 1.

Creating Global Bonds, Grade 12 Sep 12 2021 What if you could challenge your twelfth-grade students to explore energy consumption and climate change in their own communities, and connect that information with other communities around the world? With this volume in the STEM Road Map Curriculum Series, you can! Creating Global Bonds outlines a journey that will steer your students toward authentic problem solving while grounding them in integrated STEM disciplines. Like the other volumes in the series, this book is designed to meet the growing need to infuse real-world learning into K–12 classrooms. This interdisciplinary, three-lesson module uses project- and problem-based learning to help students create an action plan to address issues of energy consumption and climate change, exploring the topic at both local and global levels. Students will gather data on energy consumption and climate change in their communities, partnering with international students to undertake problem-solving activities that examine issues that are both common and unique to each community. To support this goal, students will do the following: · Identify modes and trends in energy consumption in their communities and regions; · Analyze how those patterns of energy consumption impact climate change; · Partner with students internationally to coordinate efforts to synthesize energy consumption data and discern connections across contexts, taking the form of an international blog; · Design and present an action plan to address issues of energy consumption and climate change, ultimately delivering a white paper and interactive web-based presentation on local and international issues of energy consumption and climate change. The STEM Road Map Curriculum Series is anchored in the Next Generation Science Standards, the Common Core State Standards, and the Framework for 21st Century Learning. In-depth and flexible, Creating Global Bonds can be used as a whole unit or in part to meet the needs of districts, schools, and teachers who are charting a course toward an integrated STEM approach.
