It began in October 2015 and the University of Siena is the host institution of the project. The project is focussed upon two Tuscan riverine corridors leading from the Gulf of Follonica in the Tyrrhenian Sea to the Colline Metallifere. It aims to document and analyze the form and timeframe of economic growth in this part of the Mediterranean, which took place between the 7th and the 12thc. Central to this is an understanding of the processes of change in human settlements, in the natural and farming landscapes in relation to the exploitation of resources, and in the implementation of differing political strategies. This volume presents the multi-disciplinary research focussed upon the key site of the project, Vetricella, and its territory. Vetricella is thought to be the site of Valli, a royal property in the Tuscan march. It is the only Early Medieval property to be extensively studied in Italy. Located on Italy's Tyrrhenian coast, the archaeology and history of this site provide new insights on estate management, metal production and wider Mediterranean relations in the later first millennium. Apart from reports on the archaeology, the finds from excavations and environmental studies, three essays consider the wider European historical and archaeological context of Vetricella. Future monographs will feature studies by members of the project team on aspects of Vetricella, its finds and territory. A unique textual and visual learning system, colorful graphs, and causation chains clarify concepts. The book presents and reinforces core concepts, then gives opportunities to immediately assess your comprehension. Readers study the latest economic information on economic growth, income distribution, federal deficits, environmental issues, and other developments in economics today with an engaging, easy-to-follow format that applies principles to everyday life. The documents in this series originated with a proposal made by R. Buckminster Fuller to the International Union of Architects (I. U. A.) at their VIIth Congress in London, England in July, 1961, launching the World Design Science Decade. He proposed then that the architectural schools around the world be encouraged by the I. U. A. to invest the next ten years in a continuing problem of how to make the total world's resources which [in 1961] serve only 40% serve 100% of humanity through competent design despite a continuing decrease of metal resources per capita. In essence, The World Design Science Decade series of documents suggests, in great detail, ways in which world architectural schools, and specifically their students, should initiate, and assume The Design Science Decade. The total series includes many of Fuller's most prescient ideas. A note from the series editor, John McHale: "Though the language of some of the texts may seem difficult at first approach, it should be borne in mind that one of our major problems in thinking today [1965] is the use of language systems which still represent a fixed, structurally compartmentalized world view. The terms available to us for the expression of dynamic, rather than static, concepts are far from satisfactory. Fuller's language is particularly representative of the 'transitional state' (of the western world) between the older, traditional, noun-centered culture to its present day, changing, verb-centered culture'. In his search for an adequately descriptive terminology he tends to employ concepts and usages from many different fields juxtaposed in ways which may be unfamiliar to those more customarily restrained within the vocabularies of particular disciplines." Description by the Buckminster Fuller Institute, courtesy of The Estate of R. Buckminster Fuller Inscriptions were one of the trademarks of Romanization. Used as a real mass media, they covered almost all facets of Roman public and private life. Following common patterns, however, this habit of engraving inscriptions, the so-called "epigraphic habit", took shape in different manifestations in each region, in each province, configuring diverse and attractive epigraphic cultures. This volume, the result of a Creative Europe project coordinated by the University of Navarra and with the participation of the University of Coimbra, the one at Bordeaux and La Sapienza in Roma and, also, of the Museo Nazionale Romano and different research centers in Portugal, France, Spain and Italy, reviews not only the functions of some of these inscriptions with new approaches to well-known repertoires but also the new tools that -from the rise of the Internet to the use of digital photogrammetry, from digital epigraphy to 3d epigraphy- are being implemented for their study, their understanding and, above all, the social dissemination of their values, builders, in large part, of European identity.
