*Flexible Imputation of Missing Data, Second Edition* May 14 2021 Missing data pose challenges to real-life data analysis. Simple ad-hoc fixes, like deletion or mean imputation, only work under highly restrictive conditions, which are often not met in practice. Multiple imputation replaces each missing value by multiple plausible values. The variability between these replacements reflects our ignorance of the true (but missing) value. Each of the completed data set is then analyzed by standard methods, and the results are pooled to obtain unbiased estimates with correct confidence intervals. Multiple imputation is a general approach that also inspires novel solutions to old problems by reformulating the task at hand as a missing-data problem. This is the second edition of a popular book on multiple imputation, focused on explaining the application of methods through detailed worked examples using the MICE package as developed by the author. This new edition incorporates the recent developments in this fast-moving field. This class-tested book avoids mathematical and technical details as much as possible: formulas are accompanied by verbal statements that explain the formula in accessible terms. The book sharpens the reader's intuition on how to think about missing data, and provides all the tools needed to execute a well-grounded quantitative analysis in the presence of missing data.

**Local Government and Strategic Choice** Jul 16 2021 Local Government and Strategic Choice, Second Edition is the result of a study of policy-formation in the City Council of Coventry during a four-year period. This edition is a reappraisal of the earlier edition, with an emphasis on "connective planning." Part I describes the planning strategies made in an urban setting. This part explains the City and the City Council, organization of the local authority, decision-making mechanisms, developmental planning including land use, school system planning, and cross-departmental planning. Part II is a study of city planning as a process of strategic choice that has been altered in many different ways depending on the purpose. This part also discusses the problems encountered in the planning process such as the existence of organization boundaries in the government sector. Part III deals with a fictional case that relates the uncertainties and political realities of decision-making in an urban setting. The case studies cover land allocation and development, tax, and traffic issues. Part IV discusses organizational challenge and also touches in some way on the future organizational structure of local governments. This text then explains the need for "connective planning" of how individuals build flexible

networks among decision-making agencies to serve the various interests of both the private and government sectors. This book is suitable for sociologists, city administrators and officials, local government officials, heads of government agencies, and heads of planning and engineering departments of local government units.

**Object Oriented Programming with C++, 2nd Edition** May 26 2022 The revised edition of Object-Oriented Programming with C++ has become more comprehensive with the inclusion of several topics. Like its previous edition, it provides an in-depth coverage of basic, as well as advanced concepts of object-oriented programming such as encapsulation, abstraction, inheritance, polymorphism, dynamic binding, templates, exception handling, streams, and Standard Template Library (STL) and their implementation through C++. Besides, the revised edition includes a chapter on multithreading. The book meets the requirements of students enrolled in various courses at undergraduate and postgraduate levels, including BTech, BE, BCA, BSc, MSc, and MCA. It is also useful for software developers who wish to expand their knowledge of C++. New in This Edition • Inclusion of topics like empty class, anonymous objects, recursive constructors and object slicing. • A chapter on multithreading explaining how concurrency is implemented in C++. Key Features • Presentation for easy grasp through chapter objectives, suitable tables, diagrams and programming examples. • Notes and key points provided to make the reader self-sufficient. • Examination-oriented approach through objective and descriptive questions at the end of each chapter to help students in the preparation for annual and semester tests

Welfare Economics and Social Choice Theory Aug 05 2020 This book covers the main topics of welfare economics — general equilibrium models of exchange and production, Pareto optimality, un certainty, externalities and public goods — and some of the major topics of social choice theory — compensation criteria, fairness, voting. Arrow's Theorem, and the theory of implementation. The underlying question is this: "Is a particular economic or voting mechanism good or bad for society?" Welfare economics is mainly about whether the market mechanism is good or bad; social choice is largely about whether voting mechanisms, or other more abstract mechanisms, can improve upon the results of the market. This second edition updates the material of the first, written by Allan Feldman. It incorporates new sections to existing first-edition chapters, and it includes several new ones. Chapters 4, 6, 11, 15 and 16 are new, added in this edition. The first edition of the book grew out of an undergraduate welfare economics course at Brown University. The book is intended for the undergraduate student who has some prior familiarity with microeconomics. However, the book is also useful for graduate students and professionals, economists and non-economists, who want an overview of welfare and social choice results unburdened by detail and mathematical complexity. Welfare economics and social choice both probably suffer from excessively technical treatments in professional journals and monographs.

*Operations Management in the Travel Industry, 2nd Edition* Dec 29 2019 Covering the applied managerial perspective of

the travel industry, this book looks at the core disciplines and the application of theory to practice. Considering individual and corporate social responsibility, it teaches effective managerial skills by reviewing legal frameworks, quality management and marketing, financial management, and the management of shareholders and stakeholders. It discusses current trends such as sustainability and governmental emission targets against a background of the needs of a commercial business to innovate and increase profits. A valuable tool for both students and those working in the travel industry, this new edition includes new content, a revised structure and all-new international case studies.

**Introduction to Transportation Planning** Jan 28 2020 When originally published in 1975, (here re-issuing the 3rd edition of 1985), this was the only genuinely introductory textbook to the subject of transportation planning. The introductory chapter places the issue of transport in its broader societal context, relating it to demographic, socio-economic, political and environmental considerations. The increasing importance of technology is recognized in the chapter which covers commonly used software packages. As a whole the book provides a basic introduction to the traffic estimation stage of the transport planning process and forms a general guide and survey to the whole subject.

Financial Economics, Risk And Information (2nd Edition) May 02 2020 Financial Economics, Risk and Information presents the fundamentals of finance in static and dynamic frameworks with focus on risk and information. The objective of this book is to introduce undergraduate and first-year graduate students to the methods and solutions of the main problems in finance theory relating to the economics of uncertainty and information. The main goal of the second edition is to make the materials more accessible to a wider audience of students and finance professionals. The focus is on developing a core body of theory that will provide the student with a solid intellectual foundation for more advanced topics and methods. The new edition has streamlined chapters and topics, with new sections on portfolio choice under alternative information structures. The starting point is the traditional mean-variance approach, followed by portfolio choice from first principles. The topics are extended to alternative market structures, alternative contractual arrangements and agency, dynamic stochastic general equilibrium in discrete and continuous time, attitudes towards risk and towards inter-temporal substitution in discrete and continuous time; and option pricing. In general, the book presents a balanced introduction to the use of stochastic methods in discrete and continuous time in the field of financial economics.

*Who Shall Live?* Dec 01 2022 Since the first edition of *Who Shall Live?* (1974) over 100,000 students, teachers, physicians, and general readers from more than a dozen fields have found this book to be a reader-friendly, authoritative introduction to economic concepts applied to health and medical care. Fuchs provides clear explanations and memorable examples of the importance of the non-medical determinants of health, the dominant role of physicians in health care

expenditures, the necessity of choices about health at the individual and societal levels, and many other compelling themes. Now, in a new introduction of some 8,000 words including new tables and figures, Fuchs, often called the “Dean of health economists”, concisely summarizes the major changes of the past 37 years in health, medical care, and health policy. He focuses primarily on the United States but includes remarks about health policy in other countries, and addresses the question of whether national health care systems are becoming more alike. In addition to reviewing changes, the introduction explains why health expenditures grow so rapidly, why health spending in the United States is so much greater than in other countries, and what physicians need in order to practice cost-effective medicine. This second expanded edition also includes recent papers by Fuchs on the economics of aging, the socio-economic correlates of health, the future of health economics, and his policy recommendations for the United States to secure universal coverage, control of costs, and improvement in the quality of care. As was true of the first expanded edition (1998), this book will be welcomed by current students and life-long learners in economics, other social and behavioral sciences, medicine, public health, law, business, public policy, and other fields who want to understand the relation between health, economics, and social choice.

Equity Choices and Long-Term Care Policies in Europe Nov 07 2020 This title was first published in 2001: Employing an interdisciplinary and comparative approach to equity in long-term care, this book addresses the fact that demographic changes leading to ageing populations, financial pressures and changes in traditional support systems have brought long-term care and the redesign of care systems to the top of the European social policy agenda. Despite the importance of this issue, however, the question of equity in long-term care has until now received relatively little attention in social policy

research. Rather than focusing on theories of social justice or the analysis of specific interpretations of equity, this book develops key dimensions of equity choices in a framework for systematic comparative analysis. This tool is then used to investigate long-term care policies in Europe, exploring equity choices in both the provision and the finance of long-term care. These choices are discussed comparatively with regard to the implications for the various actors and are also contrasted with basic welfare state objectives. This book represents an important addition to comparative research into several key areas of welfare and welfare state design. It explores the division of responsibilities in long-term care systems between the public and private and formal and informal sectors, the relationships between different welfare state objectives, the different types of welfare state intervention, and the principles and choices surrounding the allocation of resources and burdens.

*Managing Customer Value: One Step At A Time (Second Edition)* Nov 19 2021 How do you take an individual who has never done business with your organization and gradually transform them into the best possible customer? How do you decide how much to spend on various marketing actions? How do you think about the pricing decision with a view to optimizing the value of your customers as assets? Where do you start, what tools do you use, and what heuristics are useful in making these decisions? This book attempts to answer questions such as these. The one-sentence summary of the answer, though, is simple — hold the individual's hands and walk them up a value ladder, one step at a time. This book is written for an advanced student of business and the practicing manager. It presents an integrated view of the marketing function. In particular, it focuses on all the activities that a firm engages in to create and manage value - not just the customer-facing activities. It links the traditional views of customer value with the finance, accounting, human resources, organizational behaviour, information technology and operations functions of the organization. It draws on the science of behaviour change and the data sciences to present a contemporary view of the customer value function. The content is

meant to be prescriptive — it describes a process for value creation and management, yet analytical; theoretical, yet empirically driven. It urges the reader to think about the customer value function to be organized along activities that the firm would like the customers to engage in, not activities that the firm engages in. It presents a framework that is not only conceptually driven but also has a sound mathematical basis.

Local Government and Strategic Choice (Routledge Revivals) Sep 17 2021 First published in 1969, this book is concerned with the processes of policy-making in local government. The authors address themselves to the basic challenge of planning in a democracy and consider issues such as how those elected to exercise choice on our behalf can preserve and expand their capacity to choose discriminatingly, when the sheer complexity of the issues facing them tends all the time to make them increasingly dependent on the skills and judgements of their professional advisers. This question is explored in relation to the many different, yet interdependent, aspects of the planning process which impinge on any local community – with particular reference to the planning of housing, transport, education, and shopping, of land use and local government finance. The book is the outcome of a four-year program of research during which a mixed team of operational research and social scientists was given a unique opportunity to observe the ways in which decisions were made and plans formulated in one particular city- Coventry. It covers both political and professional aspects of local government in 1960s Great Britain and has had important implications for urban governments throughout the world.

**Linguistic Choice Across Genres** Oct 26 2019 This book, based on revised papers originally delivered at the VII International Systemic Functional Workshop in Valencia in 1995, explores some of the choices open to speakers and writers for the expression of meaning in different socio-cultural contexts. Many of the papers draw their inspiration from models of language developed by Michael Halliday and in particular recent theories of variation in relation to texts and genres explored by Halliday and his followers. There is an emphasis on the interdependence and interaction of linguistic choices across sentence boundaries and speaking turns, and also a consistent focus across many papers on the importance of lexicogrammar in the construction of texts. Several papers examine the differences between native-speaker and non-native-speaker choices in speech and writing. The volume also contributes to our understanding of differences and similarities between spoken and written varieties of English and of the central significance of interpersonal functions in the communication of messages. By drawing on naturally-occurring data collected on a range of genres as diverse as philosophy articles, scientific research papers, emergency telephone calls, and casual conversation, contributors both refine descriptions of the relations between text and context and offer numerous new insights and analyses.

**Human Choice and Computers** Dec 09 2020 Human Choice and Computers: Issues of Choice and Quality of Life in the Information Society presents different views about how terrorist actions are influencing political and social discussions and decisions, and it covers questions related to legitimacy and power in the Information Society. Ethical principles are important guidelines for responsible behavior of IT professionals. But even under strong external pressure, long ranging aspects such as education and the roles of developing countries in the Information Society are important to discuss, especially to enable all to actively participate in information processes.

**Marketing Management, 2nd Edition** Aug 17 2021 Marketing is a way of doing business. It is all pervasive, a part of everyone's job description. Marketing is an expression of a company's character, and is a responsibility that necessarily belongs to the whole company and everyone in it.

*Choice, Decision, and Measurement* Mar 12 2021 This volume is the result of a conference held at the University of California, Irvine, on the topics that provide its title -- choice, decision, and measurement. The conference was planned, and the volume prepared, in honor of Professor R. Duncan Luce on his 70th birthday. Following a short autobiographical statement by Luce, the volume is organized into four topics, to each of which Luce has made significant contributions. The book provides an overview of current issues in each area and presents some of the best recent theoretical and empirical work. Personal reflections on Luce and his work begin each section. These reflections were written by outstanding senior researchers: Peter Fishburn (Preference and Decision Making), Patrick Suppes (Measurement Theory and Axiomatic Systems), William J. McGill (Psychophysics and Reaction Time), and W.K. Estes (Choice, Identification and Categorization). The first section presents recent theoretical and empirical work on descriptive models of decision making, and theoretical results on general probabilistic models of choice and ranking. Luce's recent theoretical and empirical work on rank- and sign-dependent utility theory is important in many of these contributions. The second section presents results from psychophysics, probabilistic measurement, aggregation of expert opinion, and test theory. The third section presents various process oriented models, with supportive data, for tasks such as redundant signal detection, forced choice, and absolute identification. The final section contains theory and data on categorization and attention, and general theoretical results for developing and testing models in these domains.

Rational Choice and Strategic Conflict Sep 25 2019 "This book is refreshing, innovative and important for several reasons. Perhaps most importantly, it attempts to reconcile game theory with one-person decision theory by viewing a game as a collection of one-person decision problems. As natural as this approach may seem, it is hard to find game theory books that really implement this view. This book is a wonderful exception, in which the transition between decision theory and game theory is both smooth and natural. It shows that decision theory and game theory can go—and, in fact, must go—hand in hand. The careful exposition, the many illustrative examples, the critical assessment of traditional game theory concepts, and the enlightening comparison with the subjectivistic approach advocated in this book, make it a pleasure to read and a must have for anyone interested in the foundations of decision theory and game theory." Andrés

Perea (Maastricht University) "Gabriel Frahm's relatively nontechnical book is a bold synthesis of decision theory and game theory from a Bayesian or subjectivist perspective. It distinguishes between decisions, or one-person games, and games with two or more players, but Frahm argues that this distinction is not always necessary—the two kinds of games can be analyzed within a common theoretical framework. He models the dynamics of choice in several different settings (e.g., information may be complete or incomplete as well as perfect or imperfect), including one in which players look ahead and make farsighted calculations on which they base their choices. His book contains many provocative examples that illustrate the advantages of a unified theory of rational decision-making." Steven J. Brams (New York University) Asset Pricing and Portfolio Choice Theory Jun 14 2021 This book is a textbook at the Ph. D. or Masters in Quantitative Finance level. It covers single-period, discrete-time, and continuous-time financial models. It provides introductions to many current research topics, and each chapter contains exercises. (Quelle: [www.buch.ch](http://www.buch.ch)).

*Rational Choice* Jul 28 2022 Assuming no prior knowledge, this widely-used and critically-acclaimed text provides a clear introduction to, and uniquely fair-minded assessment of, Rational Choice approaches. Covenants, Creation and Choice, Second Edition Oct 31 2022 Have you ever wondered how we got here and why we are here? Do you believe that the universe and life on Earth came about through creation by a master designer, or do you still believe in the process of evolution? Do you know that God works through covenants? God has a covenant relationship with His creation. It is essential to know about covenants in order to understand God's desire that we become more intimate with Him. Taken together, this study of covenants and creation provides compelling spiritual and scientific evidence that the universe was created exactly as described in the Bible. Many of the questions and arguments about creation and evolution are also covered in this book. We hope that it will enable you to make a more informed choice about what to believe, because what you believe has eternal consequences.
