AIR CRASH INVESTIGATIONS - SHOT DOWN OVER UKRAINE? - The Crash of Malaysia Airlines

Flight MH17 Sep 05 2020 On 17 July 2014, at 13.20 a Boeing 777-200 with the Malaysia Airlines nationality and registration mark 9M-MRD disappeared to the west of the TAMAK air navigation waypoint in Ukraine. The aeroplane impacted the ground in the eastern part of Ukraine, near the villages of Hrabove, Rozsypne and Petropavlivka. All 298 persons on board lost their lives. The in-flight disintegration of the aeroplane near the Ukrainian/Russian border was the result of the detonation of a warhead. The weapon used was a 9N314M-model warhead carried on the 9M38-series of missiles, as installed on the Buk surface-to-air missile system. But was MH17 really hit by a 9N314M model war head mounted on a 9M38 series missile? Careful examination of the available facts show that the conclusion of the Dutch Safety Board (DSB) are questionable to say the least. The report is a mixture of an air crash investigation and a criminal investigation.

The Tape-recorded Interview Dec 29 2019 Since 1980, *The Tape-Recorded Interview* has been an essential resource for folklorists and oral historians - indeed, for anyone who uses a tape recorder in field research. When this book was first published, the reel-to-reel recorder was the favored format for fieldwork. Because the cassette recorder has almost completely replaced it, Ives has revised the first chapter, *How a Tape Recorder Works*, accordingly and has included a

useful discussion of the differences between analog and digital recording. He has also added a brief section on video, updated the bibliography, and reworked his original comments on tape cataloguing and transcription. As in the first edition, Ives's emphasis is on documenting the lives of common men and women. He offers a careful, step-by-step tour through the collection process - finding informants, making advance preparations, conducting the actual interview, obtaining a release - and then describes the procedures for processing the taped interview and archiving such materials for future use. He also gives special treatment to such topics as recording music, handling group interviews, and using photographs or other visual material during interviews.

Audiobooks, Literature, and Sound Studies Jun 02 2020 This is the first scholarly work to examine the cultural significance of the "talking book" since the invention of the phonograph in 1877, the earliest machine to enable the reproduction of the human voice. Recent advances in sound technology make this an opportune moment to reflect on the evolution of our reading practices since this remarkable invention. Some questions addressed by the collection include: How does auditory literature adapt printed texts? What skills in close listening are necessary for its reception? What are the social consequences of new listening technologies? In sum, the essays gathered together by this collection explore the extent to which the audiobook enables us not just to hear literature but to hear it in new ways. Bringing together a set of reflections on the enrichments and impoverishments of the reading experience brought about by developments in sound technology, this collection spans the earliest adaptations of printed texts into sound by Charles Dickens, Thomas Hardy, and other novelists from the late nineteenth century to

recordings by contemporary figures such as Toni Morrison and Barack Obama at the turn of the twenty-first century. As the voices gathered here suggest, it is time to give a hearing to one of the most talked about new media of the past century.

Handbook of Early Intervention for Autism Spectrum Disorders Oct 19 2021 Current rates of autism diagnoses have been cause for concern and research as well as rumor and misinformation. Important questions surround the condition: how early can an accurate diagnosis be made? At what age should intervention start? How can parents recognize warning signs? And what causes autism in the first place? There are no easy answers, but the Handbook of Early Intervention for Autism Spectrum Disorders gives researchers, practitioners, and academics the science and guidance to better understand and intervene. Background chapters survey the history of professional understanding of the disorders and the ongoing debate over autism as a single entity or a continuum. Chapters on best methods in screening, assessment, and diagnosis reflect the transition between the DSM-V and older diagnostic criteria. And at the heart of the book, the intervention section ranges from evidence-based strategies for developing core skills to ethical concerns, cultural considerations, and controversial treatments. Included in the Handbook's broad-based coverage: Designing curriculum programs for children with autism spectrum disorders (ASD). Mainstream education for

children with ASD. Teaching independent living skills to children with ASD. Social skills and play. Behavioral and mental health disorders in children with ASD. Training and supporting caregivers in evidence-based practices. Teaching cognitive skills to children with ASD. The Handbook of Early Intervention for Autism Spectrum Disorders is a comprehensive reference for researchers, professors, and graduate students as well as clinicians and other scientist-practitioners in clinical child and school psychology, child and adolescent psychiatry, social work, rehabilitation, special education, and pediatric medicine.

Phonosurgery Aug 24 2019 "Phonosurgery: theory and practice" is a book that makes an important contribution to the literature in laryngology. Professor Isshiki has been a driving force in the investigation and correction of certain conditions of the voice. His leadership in this field over two decades has proved to be an inspiration to those interested in the diagnosis and correction of the abnormal voice. His unique background and training in both otolaryngology and plastic surgery has provided him with fundamental knowledge and experience in the study of the voice and larynx and has given him an opportunity to utilize innovative surgical techniques in the correction of some of these problems. Professor Isshiki's name is indelibly linked with laryngeal framework surgery, and those who read this book will not be disappointed.

The book provides very adequate information on the physiology and pathology of the voice. Emphasis is given to diagnostic aspects of abnormalities of the voice which have been made easier with the development of high technology, such as the use of the computer and improved laryngoscopes, which include brighter lights, higher resolution lenses, and, when combined with stroboscopy and high-speed filming videolaryngoscopy, provide a valuable tool in facilitating communication between the patient, the physician, and the voice therapist.

Linguistic Dimensions of Crisis Talk Feb 08 2021
This book offers an HPSG-based discourse grammar
for a controlled language (Air Traffic Control) that
allows the identification of well-formed discourse

patterns. A formalisation of discourse theoretical structures that occur especially in crisis situations that involve potential aviation disasters is introduced. Of particular importance in this context are discourse sequences that help secure uptake among the crew and between crew and tower in order to coordinate actions that might result in avoiding a potential disaster. In order to describe the relevant phenomena, an extended HPSG formalism is used. The extension concerns the capability of modelling speech acts as proposed by Searle & Vanderveken (1985). The grammar is modelled by employing XML as a denotational semantics and is applied to the corpus data. This work thus lays the foundation for the automatic recognition of discourse structures in aviation communication.
